Hydrofoil comparison

Predicted net power, mean of 0.5–1.0 m/s

Final v5 rotor

3 blades · **NACA 4412** · Ø 203.2 mm

+28 % predicted power at 0.6 m/s vs initial rotor

0.6 m/s predicted self-start velocity

0.93 W predicted output at 0.7 m/s

All values are model predictions (BEM rotor model, NeuralFoil polars), not yet experimentally verified. Modeled generator: CubeMars GL60 KV25; no-load losses unverified.
