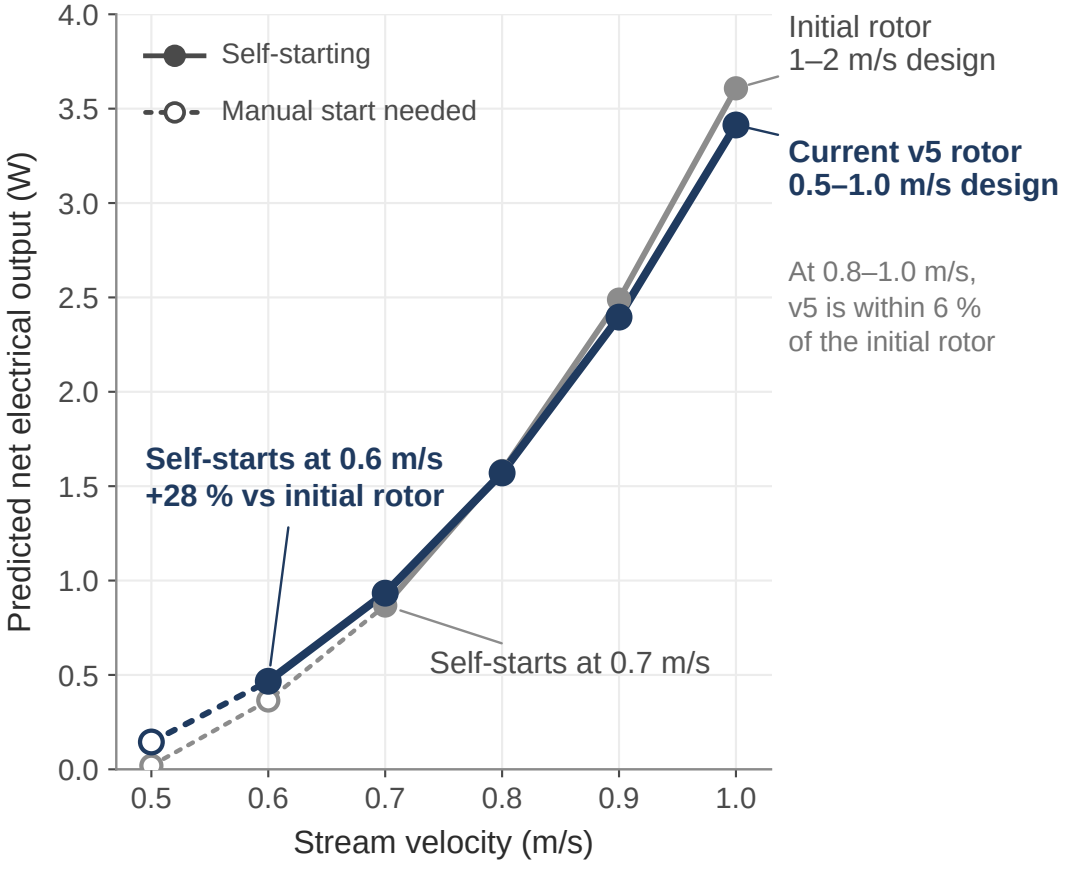
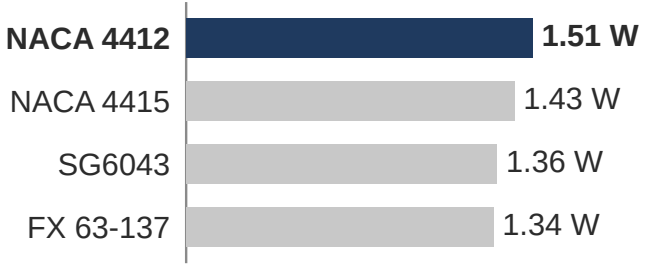
Low-flow performance



Model predictions; experimental validation pending.

Hydrofoil comparison



Mean predicted net output, 0.5–1.0 m/s

SG6043: highest 2-D lift-to-drag ratio (56 vs 49)

NACA 4412 (selected): highest predicted system output

Generator matching: CubeMars GL60 KV25

Speed constant	21.5 rpm/V	manufacturer curve
Torque constant	0.44–0.48 N·m/A	manufacturer curve
Operating torque	4–26 % of rated	model prediction
No-load losses	**not yet measured**	unverified

Main uncertainty: at the upper-bound loss estimate, output falls 13 % at 1.0 m/s and to zero at 0.5 m/s.
